

National Marketing Firm Modernizes Quotas for Complex Sales

Reduced annual quota planning cycles from 8-10 weeks to under 3 weeks

Improved quota-to-attainment correlation by 20%+ in the first year

Eliminated 70% of manual adjustments during mid-cycle quota changes

SITUATION

A national marketing services company operated a diversified sales organization supporting multiple product lines, customer segments, and regional sales models. Quotas were assigned annually and adjusted throughout the year based on market conditions, new offerings, and changes in account ownership.

Quota setting relied heavily on spreadsheets and manual coordination across sales operations, finance, and leadership teams. Historical performance, territory potential, and strategic growth targets were considered, but aligning these inputs consistently across thousands of sellers proved increasingly difficult.

CHALLENGE

As the business evolved, quota cycles became slower and more contentious. Adjustments required significant manual effort, and mid-cycle changes often led to disputes due to limited transparency into how targets were set or modified. Sales leaders lacked confidence that quotas reflected real opportunity, while operations teams struggled to manage exceptions without reworking entire cycles.

The lack of a governed, system-based approach also made it difficult to analyze quota effectiveness over time or simulate alternative scenarios before committing to changes.

SOLUTION

The company implemented a centralized, no-code quota management framework that unified quota design, distribution, and governance. Quotas were modeled using structured inputs such as historical performance, territory potential, and strategic weighting factors, all managed within a single system.

Templates standardized quota logic across teams, while scenario modeling allowed leadership to test changes before publishing. Mid-cycle adjustments could be applied selectively without recalculating entire plans, with full versioning and audit history preserved.

OUTCOMES

Quota cycles became faster, more transparent, and easier to govern. Sales teams gained greater trust in how targets were set, while operations teams reduced manual workload and exception handling. Leadership gained clearer insight into quota effectiveness, enabling continuous refinement rather than annual resets.
